

Interview Experience

2018

Aravind for ML Interviews

1. You need to know basics of ML (Bishop's PRML)
2. Deep learning stuff like CNNs, LSTMs, etc
3. Language models and a bit of nlp basics would also be required.
4. Microsoft was concentrating on NLP last time, flipkart and IBM and honda were looking for computer vision.
5. Also study basic probability and linear algebra questions.
6. Learn a bit about language models and the basics of lstm based models. If you tell them that you don't know nlp, they will not ask you much about it, but still you should know the basics.
7. Be good with basic probability questions and linear algebra. MS and flipkart mostly only asked maths.
8. MS also asked algos like:
 - a. Derive SVM
 - b. Derive backprop for RNN
 - c. Given a lstm language model, how would you sample from it?
 - d. Derive the maximum likelihood estimate for a gaussian model
 - e. derive the same for a Bernoulli distribution.
9. They do go deep into deep learning. Some guy asked me about Batch Norm and it's full explanation.
10. Linear Algebra and probability are a must. Even I wrote about GAN, nobody cared. People care about CNNs Rnns LSTMs
11. Interview timings:
 - a. ~1 hr for Microsoft [Not selected]
 - b. ~1.5 hrs Flipkart [Selected]
 - c. ~30 mins IBM [Selected]

Intel

Sakshi

1. Interview was quite fun. Very interactive. The interviewer was not stressing you out and helping you frame your answers. Tell me about yourself. Then looked closely into my cv.
2. Asked details of a few projects that I had mentioned. Then I myself told him I am doing mtech project in deep learning. So he asked a few ml / dl questions.
3. Don't remember questions as such, but mostly related to the work you have done.
4. Asked a few hr questions in between to lighten the mood.
5. One specific question that I remember because I struggled answering it was- there are lots of sparse matrix in dl. So suggest a way to minimise space required i.e. more intelligent way to store matrices in deep learning instead of storing them as it is. I tried to answer something. Basically he didn't want a very right or accurate Answer. It was a very open ended question with lots of solutions. Just wanted to check my approach to any problem I guess.

Ishank

1. Difference between 3G and 4G. Their baud-rates. And few other communication related questions which he doesn't remember now.
2. OOPs concepts.
3. What is embedded systems?
4. Projects from CV.

Palakh

1. Most of the interview was on SQL queries related to joins.

Microsoft

Sakshi

1. Basically they first asked basic questions like about yourself.
2. What subject you like and all.
3. What is a bst. How would you check if the tree is bst?
4. If you are given a tree, How do identify the largest bst in terms of height. So it was going well But I got really confused in the last question. I couldn't answer it properly. But also I feel that they were in no mood of hiring people other than cse. Because I asked a few cse people and they asked them just inorder traversal and selected them.

Enphase

Prateek

For me, they asked 3 coding questions, simple, loop in LL, run-length encoding, mirror of tree, resume, project, little bit data science, don't focus on it, asked about some scenario from one of my projects, not very difficult, I would say, just stay confident and interact actively, show interest, you don't have to answer each question correctly, just have to leave the interviewers with a good mood.

2019

SRI-Bangalore (Battle of Masters)

Naina

1st round:

1. Explain your project.
2. How can you check if there is bias in a model?
3. How to reduce the bias?
4. How to reduce bias in model in case of transfer learning?
5. Why is dimensionality reduction required?
6. List the techniques used for dimensionality reduction.
7. How to detect and overcome multicollinearity in Linear regression?
8. What are shared pointers in C++? Where are they used?
9. What are containers in C++? Where are they used?
10. Technique to search a number in an array if the size of the array is not known.
11. Level order traversal in a tree using only one temporary variable.
12. Algorithm to check if 2 strings are anagram without using auxiliary space.
13. Data structure required for implementing autocomplete suggestions.

2nd round:

1. Tell all the data types provided in C along with their sizes.
2. What is the range of an integer, signed and unsigned. Why are these values defined the way they are? (IEEE standard)
3. How is an integer stored in DRAM cells?
4. What is the range of a float, signed and unsigned. Why are these values defined the way they are? (IEEE standard)
5. How is a float stored in DRAM cells? (Separate storage for exponent and mantissa)
6. What are the functions of an OS?
7. What are the differences between C and C++?
8. What is the benefit of having OOPs?
9. Describe all the searching algorithms that you know.
10. What are the prerequisites for using binary search and exponential search?

11. Describe all the sorting algorithms that you know.
12. Tell all the data structures that you know.
13. Where is Trie data structure used?
14. Walk through the creation of Trie structure and how the autocomplete suggestion can be implemented using Trie?

Verdict: [Selected for further rounds for developer profile, I didn't appear for the further rounds]

Palash

Round 1

1. Questions related to thesis.
2. OS: semaphore/mutex, thread & process scheduling and synchronization. conditional (depends on ur reply) questions on the same.
3. OOPs: memory allocation / leak, access modifiers, questions on inheritance, polymorphism & abstraction.
4. General questions on programming language you say.

Abhishek

Round 1

1. what is memory leak? what do you read when you read leaked memory?
2. Run-time vs compile time polymorphism?
3. Questions on pthread library.
4. Questions on access modifiers in c++.
5. Questions on call by value and call by reference.
6. What is priority queue and its application.
7. Questions on subjects in CV like in my case of data mining.
8. Societal contribution of your project?
9. What is trie data structure?
10. Other general questions on OOPS concepts in C++.

Hari

Round 1

1. shared_pointer, unique_pointer in C++?
2. Explain LRU OS page replacement technique?

3. Allocation of memory shell project?
4. Working of vector and unordered_set internally?
5. Array given, find two numbers whose sum is equal to k, optimized.
6. LRU data structure: Linked List.
7. Process and Thread difference.
8. If thread/process is created how OS manages the memory.
9. Does thread have private memory?
10. Context Switch: How will you assign priority to Interrupt In context switch. After context switch where is data stored?
11. What is main desirable property of OS?
12. What are articulation points of a graph?
13. Computer Vision Questions: what is YOLO?
14. Tensorflow and whatever skills written in CV.

Qualcomm

Naina

Technical Round:

1. Introduce yourself.
2. Explain your M.Tech. project. What language has been used?
3. The interviewer wrote down all my skills, as per the resume, on a sheet of paper and I was asked to grade them on a scale of 0-10 (10 being the highest).
4. Based on the grades, I was asked why I graded something more as compared to the other. For example, I was asked why I graded C more than python given that my M.Tech. project is on python.
5. Tell all the data types provided in C along with their sizes.
6. Given a struct, I was asked to tell the size of the structure.
7. Write a program to replace a node in a linked list with a given node.
8. Write the function call for malloc.
9. What part of the memory is used for dynamic allocation of variables?
10. Write a program to pass a struct from main function to another function which will assign the values to the variables inside the struct. Print those values in the main function. Will the correct values get printed in the main function? (the interviewers wanted to check the concepts of memory layout)
11. Can the variables declared in a function definition access heap?

12. What is the default value assigned to uninitialized static variables?
13. Given $a = 0$, $b = 1$. After performing $a++\&\&b++$, what would be the values of a and b .
14. Given $a = 0$, $b = 1$. After performing $++a\&\&++b$, what would be the values of a and b .
15. Given $a = 0$, $b = 1$. After performing $a++||b++$, what would be the values of a and b .
16. Given $a = 0$, $b = 1$. After performing $++a||++b$, what would be the values of a and b .
17. Write a function that counts the number of ones in the binary representation of a floating point number.
18. Explain the layers of OSI.
19. Write the steps followed in case of socket programming, both on the server side and the client side.
20. What is the difference between sockets and pipes?
21. Can pipes be used for communication between two separate physical hosts?
22. Describe the different types of pipes.
23. Why do you want to join Qualcomm?

HR Round:

1. Introduce yourself.
2. Why do you want to join Qualcomm?
3. What would be the first thing that you would do when given a new task?
4. How would you resolve a conflict with other team members?
5. What other companies are you targeting?

Verdict: [Selected]

Abhishek

Technical Round (Panel of 2 interviewers)

1. They introduced themselves and started with a joke not to call them by "sir" as it made them feel old.
2. Just to make me comfortable they asked me to explain any of my project. I explained something related to image processing. They didn't know anything about it but they cross questioned me based on application and what "new" have I done.
3. They asked me if I was good in data structures? I replied, "Yes". So they asked the following question.

4. There is an array which holds the result of a TT match. Suppose A and B are playing so the array will hold something like AABBA.....

The first one to score 11 points is the winner. I solved it using two counter variables. They asked me the complexity. I said $O(n)$. They asked me if it's possible to reduce the complexity further. I said no. Then they gave a hint that result does not matter on past score. I took some time thinking and told them it can be done in $O(1)$ Just check the last element and whosoever it is, is the winner.

5. I made "Am I a joke to you" face and said that it was a trick puzzle and not a ds problem to which they both started laughing. Then they gave me a DS problem. They drew a tree and made a vertical line passing through the root node and we had to find out whether the tree was symmetric about that vertical line(not at all nodes).
6. After struggling and answering the previous question they again mockingly asked whether I wanted a DS problem or a puzzle. I said puzzle.
7. There is a container having numbers 1 to N and they randomly took out a number from it. What data structure would you use to find that missing number? I said it can be found using some calculations and don't require any special DS.
8. Make stack using 2 queues and queue using 2 stacks.
9. Then they sent me to hr and she asked basic questions like why Qualcomm and where would you like to work in Noida, Hyderabad or Bangalore. Then she said Hyderabad will be better. I said ok. Then she said it's a yes from our side and see you in Qualcomm in couple of months. Then I went to check for Intel interviews and there was still a queue. So I went back to make sure I was selected(name in yellow paper). I was caught by the guy who was supposed to take my technical round 2 interview and he asked me what I've done so far what my interests are and explained what Qualcomm does. He also mentioned the discussion happening right now won't affect your selection.
10. Pretty silly things happened during technical round 1 like someone was yelling my name so I asked interviewers that someone was calling me so they said go and check. I was nervous so my palms were sweaty and I shook hands with sweaty palms to which they told dude you are all wet.

Verdict: [Selected]

Swapnil

Technical Round

1. Asked about a project

2. Asked questions related to OS and memory management.
3. Asked question below:

```
int *ptr;  
*ptr = 5;
```

The above code gives segmentation fault. Can you tell a series of actions that take place when this code is executed?

4. Asked 3 coding questions:
 - a. Find if a binary tree is symmetric or not.
 - b. Implement a stack using 2 queues.
 - c. Find the center element of a linked list in lesser number of computations.
5. Asked about the Minor project that I had done.

Verdict: [Not Selected]

Devyani

Technical round

- Introduce yourself.
- Thesis
 - a. Explain. I explained broadly but they wanted to go in depth so according to their response I went into a more granular level.
 - b. What data structures did you use? I said vectors and trees. (dataframe is a more accurate answer but did not want them to get into technicalities of df) How? I explained with an example.
 - c. Asked me about affiliation with Dr. Alex and Gates foundation.
- Projects
 - a. "You have worked on Tejas." (The two interviewers were noting everything) Tell me about it.
 - b. Explain the prefetching project. They asked everything in detail. Even the data structures I used to map PC and memory addresses, ROB buffers.
 - c. How did you use simulation?
- Write a code for matrix multiplication.
 - a. Written. Make two matrices A and B, and show how it is happening.
 - b. Suppose you have 64KB direct mapped cache and A= 1MB, B=1MB. What is the miss rate? I got blanked on where to start, so he reassured "dont worry its not easy, tell me what other information you need". The interviewers very helpful.
 - c. First I made a cache then I asked what is word size. He said you mean line size. Its 4B.

- d. Then I made the matrix and started doing the multiplication according to my code. As you can see, the first element is a miss as cache is empty. So 4B ie 4 data elements are brought in from memory, for which I built a byte addressable main memory for it. (All this while he was giving me hints so he felt like a mentor. Other one voiced his opinion when I was going wrong so that felt like a pointer too.)
 - e. Then I continued the process to finally get $(2+1+1+1)$ misses for every four elements to be brought in memory. For the next iteration the misses now go down to $(1+0+0+0)$ misses as they were already in cache.
 - f. Next he introduced a condition in my code that it won't run for negative numbers. How will my memory management change? I tried many answers such as not using 2s complement representation which saves a bit. He wanted to hear branch instruction (I mentioned a project on it). So when I finally mentioned that he wanted me to explain it. (Though I was giving answers which he wasn't looking for, he was noting them too)
- Discussion
 - a. "You mentioned Tejas. One of a recent employee recruited has worked on Tejas. Her name is geetika." (She made Tejas and is working in the same team in Qualcomm. I checked on linkedin.)
 - b. He was pretty happy so he started telling about his team and I asked him some doubts regarding that.
 - c. "Did you give any other interviews here at Qualcomm?" I said no. "Great. Are you interested to work with us?" "Please wait for the HR".

HR round

1. Where do you belong? Delhi or NCR? Where exactly?
2. How do you commute? Is hostel fine? Are your parents comfortable with it?
3. Do you know about Qualcomm? Why are you interested?
4. Tell me about your bachelors.
5. I asked about their work culture and work life balance.
6. "Everything looks fine. See you in the next 5/6 months".

Verdict: [Selected]

Churchill

HR cum Technical Round (~15 mins)

1. What do you know about qualcomm?

2. Have you worked on Linux? Or Any open source project? I said yes, for which he asked me to explain the project.
3. He then explained the work of the team very diligently for which they were hiring. It mainly consisted work on Linux mainly **systems programming**.
4. He then asked me whether you would be interested to relocate to hyderabad.
5. He then asked me whether I have any questions. I told him that I am looking after core software development work and would not be happy with firmware development. He then assured that work is related to systems programming which involves interaction with OS.

Technical Round (Panel of 2 interviewers) (~ 40 mins)

1. Explain work experience projects. He was quite interested in knowing every single detail. This went on till about 15 minutes. There were cross questions for every single detail I told him. He then asked me the team strength which were involved in the project.
2. Algorithm to implement a stack using 2 queues?
3. Algorithm to implement a queue using 2 stacks?
4. Algorithm of spiral order traversal of binary tree? I got confused with zig-zag traversal and later corrected myself. I had told them approach based on stack for which he asked me to suggest the same using the queue.
5. Sequence of events happening after the execution of code below. He was mainly interested in OS level events.

```
int *ptr;
```

```
*ptr = 5;
```

6. What is cache memory? What is cache coherency? He then gave me a scenario wherein cache coherency issue could arise and asked me what is my take on it. I explained to him as per my understanding and he was convinced.
7. He asked me to explain the OS assignment of FTP client server in my resume. I explained to him about it upon which he told me that your design isn't scalable and asked me to change it and make it scalable for practical number of clients say ~500. I suggested him various changes in that design but he wasn't convinced till the end. Later (after the interview) I realized that my suggestions were not that good.
8. Asked me about priority queue and its practical implementation?
9. What is semaphore and mutex? How are they different from each other and scenarios wherein each is most suitable.
10. They were interested to stretch the interview further but HR interrupted and asked them to wind it due to time constraints.

11. He then explained to me the work they do and asked me whether it aligns with my interests or not? I replied with the same answer which I did in the previous round. He then told me to wait for the next round of interviews.

HR Round

1. What do you know about Qualcomm and why do you wish to join it.
2. Where do you come from? I told him that I come from Maharashtra and then she asked me whether I would be interested to relocate to Hyderabad / Bangalore?
3. What are your strengths and weaknesses?
4. What other interviews do you have today and where do you put Qualcomm in your preference order!
5. She explained to me about work culture of Qualcomm and said that Qualcomm is more of engineering centric and their CEO itself worked in an engineering team. Hence told me that we understand woes of engineers more than other companies. She told me that we don't put pressure on engineers if our stock prices fall and engineers rule the company and mostly involved in company decisions unlike other companies.
6. Do you have any questions? I asked if given a chance, where do you wish to stay ? Bangalore / Hyderabad? And why? She answered it cleverly weighing Hyderabad more and assured me that Hyderabad is as good as Bangalore.
7. Interview ended with her saying, "See you at Qualcomm in next 5-6 months".

Verdict: [Selected]

Deepak

Round 1:

1. Explain your project.
2. Explain different CPU scheduling algorithms.
3. How do you find burst time of the processes.
4. Explain Branch predictor and why do we need it.
5. Write an efficient algorithm for rotating a 2D array by 90 degree clockwise.
6. Which profile you want to join and why.

Verdict: [Didn't get call for further round]

Sprinklr

Siddharth

1st round (1 hour)

1. Tell me about yourself.
2. Difference between threads and process.
3. Is multithreading possible on single processor.
4. Difference between logical address space and physical address.
5. Why use multithreading?
6. <https://www.geeksforgeeks.org/maximum-product-subarray/>

I first told brute force approach, he asked me to optimize it but I wasn't able to do so, In between I made a tree so he asked height of tree, number of leaf nodes and the total number of nodes.

Verdict: [Not Selected]

Satyam

1. Tell me about yourself.
2. Asked me which subjects do i like the most, I told him Operating systems. He asked me to explain any of the four projects that I wrote in my resume and it lead to a 10 min discussion about that project.
3. Coding question:
<https://www.google.com/amp/s/www.geeksforgeeks.org/split-the-given-array-into-k-sub-arrays-such-that-maximum-sum-of-all-sub-arrays-is-minimum/amp/>

I was not able to get that, an approach was in my mind but it was incorrect but still I told him about the approach and told him that why it's incorrect. He asked me calculate the complexity of my solution. Asked my why is it incorrect. A very long discussion over my approach only.

Suggestion - don't think he'll leave it and will move on to the next question instead keep trying to get the solution.

4. Any questions that i wanted to ask.

Verdict: Did not get a call for the next round.

Abhay

1. How was your day?
2. Asked about different CPU scheduling algorithm (because it was related to one of my project)
3. Given **A** and **B** print all the nodes in the tree which are at a distance **B** from the node with value **A** . given that tree has all distinct element.
4. Given a matrix of size $m \times n$ find 3 largest elements.

Verdict: Didn't get a call for 2nd round.

Deepak

1st round

1. How was your day?
2. Explain your project thesis?
3. How does CPU scheduling happens inside operating system? Explain the procedure.
4. How do you implement LRU scheduling? Explain efficient algorithm.
5. Some questions from max-heap.

Suggestion:

Explain your project briefly in layman's term.

After every question, think before you answer, take your time.

Verdict: Didn't get a call for 2nd round.

SAP Labs

Siddharth

1st round (~3.5 Hrs continuous all rounds)

1. Tell me about yourself
2. Explain your thesis project
3. What is CNN, Max-pooling, loss function
4. Write the equation of loss functions and graph
5. Activation function, difference between Relu and leaky relu
6. Back propagation working
7. Why mean square error , why do we square the error
8. Write sql query for A-B (A and B are sets) without using sub query
9. Inner join, left outer join, right outer join
10. C++ concepts- Virtual functions, friend function, ambiguity in multiple inheritance
11. What is aggregation and composition
12. Can we create object of parent class of child class type and vice versa

2nd round

Discussion on this problem: <https://www.geeksforgeeks.org/diameter-of-a-binary-tree/>

First I came with brute force then optimized it. Then I wrote the code But it wouldn't perform on skewed tree. Then again I thought and then came up with right algo I had to code it again, dry run on some test cases. All this while he was asking questions related to my code also.

3rd round

1. Difference between semaphore and mutex?
2. Write pseudo code for wait and signal function?
3. Spin locks and busy waiting?
4. What is deadlock, necessary conditions for deadlock?
5. Deadlock prevention methods and avoidance?
6. Banker's algorithm?
7. Some questions on scheduling?
8. Some on OS assignments like how did you implement linux shell commands?

4th round

1. Pthread library and its functions
2. Write a code in which n-ary tree is given and we have to run nodes of each level concurrently using threads. This question reduces to level order traversal of n ary tree. He asked first what kind of data structure will be used and why. Then he asked me to write code. Tell time complexity and space complexity. Long discussion on this question and how we can optimize it.
3. Quick sort complexity and some other questions on quicksort only like why worst case happens, how we can eliminate it etc.

5th round

1. Write code to check a linked list is a palindrome or not. I wrote recursive one he asked complexity and I also told him the iterative brute force and the other iterative one by reversing and storing list and then comparing it. He asked comparison of both iterative and recursive one with pros and cons.
2. Bottom view, left view, right view and top view of tree and write code of all that. He changed the question a little bit and then asked me again.
3. Question on hashing.
4. He asked that let there is a list of numbers and he wants to insert it in the list. What data structure will you use to store values for faster execution of insert operation. Here we have to ask questions like list is sorted or not.
5. Then he modified it and asked if we have to insert in sorted list and search queries are also there. There are two answers one is use hashing (space complexity increases) or use an array and binary search (time complexity increases).
6. Then he modified it further by saying both time and space is an issue.
7. How realloc() works. What happens when we resize array using realloc and there is another variable stored just after the array in the heap. How will you overcome it. Is it the responsibility of OS or the programmer.

6th Round (Finally HR round)

1. Tell me about yourself.
2. Why SAP
3. Strength and weakness
4. Your passion
5. Do you want to go for higher studies or not
6. What is your expectation in next 5 years
7. Then I asked some questions to him

7th Round (Ye final tha)

1. Do you want to work on machine learning projects only or you can join any department.
2. She asked me are you sure that you will join our company.
3. She told me about SAP, work culture, growth and some other things.

Verdict: [Selected]

Satyam

Round 1

Tell me about yourself.

How would you explain what is a database to your grandmother who does not have any knowledge about tables and all.

Write a query to get second highest value from a column. I told him a query using Top keyword, he said that i don't want to do sorting. Then i gave him a query with subquery to count the number of column values greater than the current row.

Then he asked me to give a query which uses "<".

Even after giving him answer in three different ways he suggested me a 4th one :p

Tip: this is the most favourite question in SQL for an interviewer.

How would you calculate the height of Qutub Minaar. Told him several ways but he didn't seem to be convinced.

Round 2

1. I couldn't give the exact answer but told him my approach, he seemed to be convinced with a minor update:

<https://www.google.com/url?sa=t&source=web&rct=j&url=https://www.geeksforgeeks.org/find-maximum-distance-covered-100-bikes/amp/&ved=2ahUKEwja267q0Z7mAhW3zjgGHZ8vBJIQFjACegQICAB&usg=AOvVaw00wdxRtb237cdqAzKyk&cf=1>

2. <https://practice.geeksforgeeks.org/problems/the-3-5-litre-die-hard-water-puzzle>

Verdict: [Not Selected]

Lalith

Round 1 (Technical)

1. Write code to check given tree is BST or not?
2. Write code to reverse string in-place?
3. Explain minor project? And also few OS projects (Shell implementation and CPU scheduling)
4. Explain difference between thread and process? Why thread is preferred?

Deepak

Round 1 (Technical)

1. Tell me about yourself.
2. Explain briefly your project thesis.
3. How would you explain what is a database to your grandmother who does not have any knowledge about tables and all.
4. Write a query to get second highest value from a column.
5. Swap two integers' value without using any other variable.
6. How would you calculate the height of Qutub Minaar.

Verdict: [Not Selected]

Microsoft (DS)

Abhishek

1st round

Skype call. The interviewer was a part of Bing team and he basically asked about any project that I had done. The discussion revolved around my project only.

2nd round

They asked coding question.

1) You are given the schedule of two people and you are required to find the free slot between them.

2) He then increased the number of people. I was sorting the start and the end time so it was $O(n \log n)$ he asked me to reduce the complexity. I then gave some $O(n)$ approach and he looked partially convinced.

3) He then asked a different question. Given a 2 D matrix you were required to find the maximum increasing sequence path. You are not given a start point.

I explained something using dynamic programming. Just the pseudo code and didn't write the code as I had run out of time.

And then I was rejected.

Remarks: They were looking for coders. He told me you have to be a good coder. Machine learning is a skill on top of it. So no machine learning related questions were asked during the interview.

Asmita

Round 1 (Technical) (40 mins)

1. Tell me your expectations from this job
2. Scheduling meeting problem - problem is to schedule meeting of 2 persons given their busy/meeting hours
 - To find all possible free slot
 - meeting duration is of 30 mins
 - meeting duration is of 10 mins and so on
 - To find optimal solution using any data structure

Interviewer was looking for your approach to solve problem and was not interested in exact solution.

3. Explain your master thesis and related questions.
4. K-means and K-nearest neighbors -
 - Explanation of these
 - Applications and differences
5. Preference for location.

Round 2 (HR)

1. Preference for profile.
2. Why do you want to work in ML.
3. Questions related to previous job experiences.

Verdict: [Selected]

Intel

Abhishek

1. Asked me about my educational background and CGPA.

2. Then asked me where do you see yourself in 5 years. I told him that researching and publishing papers and filing patents.
3. He questioned me why have I come for interview and told me that they were a product company but we have internal labs which take care of it. I knew my interview was over at that point.
4. Then he asked kadane's algorithm and find the longest sequence of 1's in an array of 0s and 1s.
I then asked about their work and he explained to me. I was then rejected.

Swapnil

1. Difference between semaphore and mutex.
2. Show system calls that take place both at the server side and client side in FTP project.

Verdict: [Not Selected]

Devyani

Technical round

- Tell me about yourself.
- Explain your thesis. Affiliation and societal impact.
- Write the kadane's algorithm and find the longest sequence of 1's in an array of 0s and 1s.
- How would you rate your C++. Are you good in python?
- Difference between C and C++.
- Are you familiar with STL? Explain maps and unordered maps and time complexities. Explain their internal working.
- Best sorting algorithm? Explain.
- Which sorting algorithm is best for getting maximum element. Explain how.
- What do your parents do? Do you have siblings? Where does he study?
- What domain are you interested in?
- After the interview I asked him for feedback. He said it was pretty good. And gave me a few general tips regarding technical interviews.

HR round

- Tell me about yourself.

- Why intel? What do you know about us. He explained about their work life balance.
- What other interviews you had before? I mentioned qualcomm and uber. How did they go? I told qualcomm went fine. Which would you prefer? I said Intel.
- “Please wait we will let you know”.

Verdict: Waitlisted after churchill and yogesh. They both accepted. There were only two vacancies in their AI team.

Churchill

Technical Round

1. Explain your projects. I started with my work experience. Then he asked for how much was your contribution in it. I explained it.
2. Algorithm to find a cycle in a graph.
3. How much would you rate yourself in C++ on the scale of and Why?
4. How much would you rate yourself in Python on the scale of and Why?
5. Explain branch predictor project. He was curious about every single detail. I explained as per that and then he asked me why didn't you publish paper on that for which I was clueless and could not answer.
6. What was your motivation for higher education (M.Tech) and what new things did you learn out of it.
7. He then asked me about my ML projects for which I explained the same. For which he said me that your profile best matches with what I do at Intel. He then explained me his work and asked me if there are any senior who work at Intel and what was their review. For which I told him that, yes there are and their review is mostly positive.
8. He then asked me about my family members especially siblings and asked me what they do and where they reside.
9. Finally he asked me whether I would be interested to join. I told him that I was only interested to join the AI team and there was an incident last year wherein a senior placed in intel was offered AI team but on joining was given some different profile. For which he said that last year we were not telling profiles upfront in interviews and there was a miscommunication from HR last time. He further told that you be rest assured this time about it. So, I accepted the offer.

HR Round

1. Where do you hail from. I told him maharashtra. He actually belonged to maharashtra-karnataka border and started speaking with me in marathi.

2. He asked me how was the technical round? I said it was decent.
3. He asked me how do you differentiate between **Open** and **Vocal**? I explained him whatever I could and he was convinced with it.
4. Asked me what are your strengths and weaknesses? I answered the same!
5. He said to me “**You are joining Intel**” and handed over goodie to me.

Verdict: [Selected]

Naina

Technical Round

1. Tell me about yourself.
2. Explain your project. Asked the title of the research paper, which was being used for reference for the project, and the name of the authors.
3. What do your parents do? Do you have siblings?
4. What are your hobbies?
5. What are your personal and professional goals?
6. What all courses have you taken?
7. What all projects have you done related to Computer Architecture? Explain the projects.

Verdict: [Not called for further rounds]

Ankit

Technical

- Explain FTP server assignment.
- Based on previous question, what is NAT in networking ?
- Given a sorted linked list, write a code for deleting particular element. I forgot to free the memory after deleting but he was okay with it.
- Explain the assignment on concurrency.
- I had prepared ML so I tried to shift his focus towards it by asking what Intel is doing in ML, he explained in detail and atlast said that he's from Networking team.
- It was a very short interview

HR

- He seemed to be in hurry, as he quickly asked me about my home state, followed by the usual "shifting to Bangalore".

- Rate yourself 1-10 (hardworking and positive attitude), give examples for that.
- I hadn't prepared this question hence, I couldn't reply satisfactorily.
- I was asked to wait for the results.

Oracle

Hari

Technical round 1 (45 min)

1. Started with tell me about yourself.
2. Asked me to implement a Queue and write complete working code by using Class name Queue and a constructor for declaring a Queue size. Enqueue and Dequeue are to be shown properly.
3. Pancake Sorting with minimum number of flips.
4. Asked Few questions from Resume.

Technical round 2 (40 min)

1. Started with my resume asked OS projects. First asked Synchronisation Problem using Semaphores project. Asked few questions from that and difference between semaphores and mutexes.
2. Now Shell implementation project. In this he asked me how you implemented ls, cd operation and why you have done this project. And some questions on Process and threads.
3. Asked two other projects in my case its **computer vision** 1. Camera Calibration 2. Object Recognition and few questions on them.
4. Asked me to write full working code of given a Matrix and need to print in Spiral Form optimised code.
5. Given a 2d array and need to print elements present in a sorted order in an array. That 2d matrix may contain duplicate elements should not print a duplicate element. Asked an optimised code.
6. Now started with puzzle 3 Bulbs and 3 Switches.

Managerial Round (20min)

1. Started with a brief introduction and asked me tell me what i know about Oracle.
2. Why you want to join Oracle.
3. What are recent trends in Software market.
4. Why there is slow down in market.
5. Given a puzzle(don't remember exactly) and asked me the approach that you apply here before coding and what all data structures use here.

HR round (20min)

1. Started with brief introduction.
2. Asked me my preference of location hyderabad or bangalore.
3. Why Oracle?
4. How you give preference to oracle comparing with other companies and why?
5. Have you done any internship? If done what are the challenges encountered
6. Why should we hire you
7. What changes will you make after joining while compared to others

They selected 5 members I was waitlisted.

Suggestions: Prepare puzzles well, they might ask to code a solution for puzzle given.

Abhay

Round 1

1. Make BST given a sorted array
2. Check if given tree is BST.
3. Make queue using two stacks

Verdict: Didn't get call for next round.

Deepak

Round 1 (Technical)

1. Tell me about yourself
2. Explain your project thesis
3. Horse race puzzle: <https://www.geeksforgeeks.org/puzzle-9-find-the-fastest-3-horses/>
4. Polymorphism and abstraction from oops concepts

5. A programming question (don't remember :()) and its implementation.

Round 2

1. How do you solve traffic light control problem using machine learning.
2. Why Oracle? How do you see yourself working here.
3. A problem from array of strings, a subjective problem. Asked the approach and its implementation of code in paper.

Verdict: Didn't get call for next round.

Lalith

Round 1 (Technical)

I was in the waiting list, so he asked me to solve difficult puzzle and wanted code for it.

Puzzle :

Triangles is a very simple game. The objective is to make as many triangles as possible, by drawing lines from one dot to another.

1. Players take turns, in each turn a player must draw one line.
2. A line may not cross other lines or touch other dots than the two that it's connected to.
3. If a player closes a triangle with his line then he gets the point for that triangle and it gets colored with his color. In order to get a point for a triangle it must be three lines between three points, and **there must be no dots inside the triangle**. It's allowed to make triangles with dots inside them, but they don't give you any points.
4. Once there are no more moves that can be made the game is over and the player who created the most triangles wins.
5. Your code must return number of triangles each player scored.

[He was not in a mood to ask anything else apart from this puzzle and code]

Verdict: [Not Selected for next round]

Marvell

Swapnil

Round 1 (~ 50 minutes)

- Questions on OS and architecture.

Round 2 (~ 20 minutes)

- 1 coding question - could not write code for it.

Verdict: [Not Selected]

Deepak

Round 1

1. Tell me about yourself
2. How can you say one computer is faster than the other.
3. A Doubly linked list implementation and its methods' in paper
4. Explain FTP client server problem.
5. Explain your project.
6. Any courses from networking?
7. CPU scheduling algorithms.

Verdict: [Not Selected]

Jeeban

It was a 4 round (3 *technical* + 1 *HR*) interview for me. All interviewers were very friendly.

My suggestion is not to panic if something goes wrong during an interview and stay cool in the whole process because you must get one chance to turn your fate. So try to grab that chance.

Round 1 (Approx. 20 mins)

- Interviewer went through my resume for 2 to 3 mins and asked me whether I was more interested in machine learning or software development (wanted to know my interest)
- Tell me about your internship. As it was in the year 2014, she showed some sympathy and ignored the details.
- Explain projects. (Emphasised on OS and computer architecture related projects)
- Asked me to write a full program in assembly language as I wrote it in my resume.

Note: I felt my performance was average in this round

Round 2 (Approx. 1 Hr)

- Asked me to tell which part of the resume was not covered in the previous round.
- Asked me about why I chose the electrical engineering department in IIT as I was already from CSE background.
- Then asked my favourite subjects in CSE as he wanted me to ask some about core CSE subjects and I told Algorithm and data structure.
- Asked DS in and out like a curious student. He touched array, queue (both normal and circular), stack, linked list (what/why/where type questions comparing with array), tree (BST, AVL: insert, delete, search operation) and reasoning type questions (GATE CSE)
- He finally asked about the location I would like to prefer.

Note: This round was turning point of interview because I was able to answer all the questions perfectly well and he was very much impressed.

Round 3 (Approx. 20 mins)

- Tell me any innovation you have done in your whole career.
- Some behavioural questions.
- Difference between real time OS and Normal OS (I told about scheduler).
- He asked different types of schedulers and scheduling policies (directly from prof. Sumantra's class)
- Again preferred location.

Round 4 (Approx. 15 mins)

- This was HR round and he asked me about the major project (machine learning).
- How would you rate your skill in C,C++ and python out of 10.
- What do you know about Marvell Company? (I knew nothing honestly :P)
- Questioned about family and parents.
- Preferred location.

Verdict : *Got an offer*

Lalith

Round 1 (Technical)

1. Write code to reverse string in-place?
2. Explain Z Algorithm and write code for the same?
<https://www.geeksforgeeks.org/z-algorithm-linear-time-pattern-searching-algorithm/>
3. What are semaphores? Difference between mutex and semaphore?
4. OS projects: CPU scheduling and shell implementation.
5. Few questions on memory allocation for process?
6. Context Switching concept in OS?

[He was mainly focusing on why did I shift to compsci [ctech] as I am from instrumentation in BTech]

Verdict: [Not Selected]

Analog Devices

Swapnil

Round 1 (1 hr)

1. Given numbers from 1 to 99 in an array(unsorted). One number is picked at random. How will you find the number that was taken out efficiently?
2. Tell about B.Tech. and M.Tech. project.
3. Questions related to OS and architecture.
4. Write a program to sort an array. I wrote merge sort. He asked me why not use Bubble sort?
5. He asked me which microcontroller I have worked on?

Round 2 (50 minutes)

There was a whatsapp video call with an official from the company for the job. He asked me technical questions related to computer architecture.

He asked me which sensors I have used so far. I said DHT11. He asked me which protocol I used for communicating with the sensor.

Round 3 (HR)

- They were trying to find if I will join the company or not.
- They asked me as to why I was taking the job as I had switched from EC to CS (C.Tech.) here.

Verdict: [Selected]

Adobe

Swapnil

Round 1 (50 min)

1. What are Smart pointers?
2. Camel and bananas puzzle.
3. What are DLLs?
4. What are XML files? Which DS can be used to represent them? How to process very large XML files due to memory constraints?

5. 1 coding question - Zig-zag traversal of a binary tree. He asked me to write the code and then explain it. Then, he asked me to take an example show the correctness of the code I had written.

I was selected for managerial round but didn't appear for it.

Verdict: [Not Selected]

Satyam

Round 1

1. Different memories allocated to a process (global memory, stack, heap, code segment)
2. A process memory is increasing while it is executing, what might be happening
3. Dangling pointer
4. How java handles the problem of memory leakage
5. Smart pointers
6. What is a binary file
7. Static libraries vs dynamic libraries and their advantages and disadvantages
8. What is DLL
9. Difference between DLL and plugins (i did not know this but still said what I thought might be the answer and said that "I think this can be the answer though I'm not sure) - my answer was incorrect :p
10. Difference between HTTP and HTTPS
11. Public key encryption
12. Mutex vs semaphore
13. Asked me to write the code:

<https://www.google.com/url?sa=t&source=web&rct=j&url=https://www.geeksforgeeks.org/maximum-size-sub-matrix-with-all-1s-in-a-binary-matrix/amp/&ved=2ahUKEwi7muCEx57mAhWczjgGHSuJCIIQFjAFegQIAxAB&usg=AOvVaw0L-6FGzih7iyMQOme6Vlcv&cf=1>

Round 2

1. About adobe.
2. Why adobe?
3. Write copy constructor for the class:

```
Class foo {  
    char *p;  
    int x;  
}
```

He was very disappointed with me, I was not doing it correct. I tried everything but nothing worked out. I was creating a **char** using **new** keyword, then he asked "how much byte you think you should ask for".. I said 1 byte but he said, "shouldn't it be the length of string", this is where I was making the mistake and he angrily moved on to the next question.

Tip: At this point you may get nervous or demotivated and screw up your whole interview as the interviewer was not at all friendly but you should keep up your spirit and forget about what happened just think about the questions coming up.

4. Deep copy shallow copy.
5. Asked me if I was asked a coding question in the 1st round. Asked me to code, I wrote only 2 lines and he moved on.
6. Mutex vs semaphore.
7. Abstract class - virtual function and pure virtual function.
8. Can we make a class abstract without having any virtual function in its definition?
9. https://www.google.com/url?sa=t&source=web&rct=j&url=https://www.geeksforgeeks.org/puzzle-9-find-the-fastest-3-horses/amp/&ved=2ahUKEwjn2pewzZ7mAhVwzjgGHVfoDEcQFjAAegQIARAB&usg=AOvVaw1VvpioLTVVbbbS29R_NHI5&cf=1

Round 3

1. <https://www.google.com/amp/s/www.geeksforgeeks.org/nuts-bolts-problem-lock-key-problem/amp/>
I did not get this one
2. You have a noble phone with 512MB RAM and 64GB storage and a 2GB application. Can we run this application on this device?
The question leads to many questions on swapping, demand paging, virtual memory, etc.
3. Can the application crash? [I said yes, when we'll have many other processes in the memory which can lead to thrashing and hence the application can crash]
4. <https://www.geeksforgeeks.org/convert-given-binary-tree-doubly-linked-list-set-3/>

Verdict: **Selected**

Suggestions: Be thorough with OS, CPP, OOP.

Abhay

First round

1. Find longest palindrome given a string
2. [Arrange the elements of given array such that it will form the largest number](#)
3. Given an array for each element find the next greater element.

Second round

1. If one process **A**, dynamically allocate some memory and store some value x in it and pass the address to another process **B**. What happen when **B** try to access it.
2. Copy a trapezoid shape from one screen to another screen. Coordinate of 4 corners are given.
3. Make an 2-D array dynamically using malloc only once.
4. When it is useful to create process rather than thread.

Third round

1. Asked which area you are interested and then asked projects.
2. A puzzle was asked that if two person jumps from a plane with a parachute and land somewhere on a **line**. Now the task is to find each other. Too much dark, they can only see in 1m range. Sound is blocked. Write some set of instructions (both will follow the same instruction) such that they can find each other.
3. Find any local maxima in a given array(in less than $O(n)$ complexity).

Verdict: [Not selected]

Flipkart

Abhay

Round 1

1. Choose any of your project and explain.(asked question on whatever terms you use)
2. Why do we use binary cross-entropy loss in binary classification instead of MSE.
3. Is binary cross-entropy loss convex?
4. Explain maximum-likelihood.
5. Explain MAP.
6. What do you know about conjugate priors.
7. Derive binary cross-entropy.
8. Derive SVM.
9. When to use bagging and when to use boosting
10. Questions on decision trees, random forest
11. What is GMM. Derive it. Which algorithm we use for it. Why can't we use neural network for GMM's mean and variance estimation, if yes then what things we have to make sure.

Verdict: Didn't get a call for 2nd round.

IBM Research

Abhay

Round 1

1. What is loss function. What is the use of it. How to optimize it.
2. What are the different methods to calculate gradients.
3. What is subgradients.
4. How backprop works in case of relu.
5. What gradient pass at $x=0$ in case of relu.
6. Diamond problem in inheritance and asked what if we want to keep both the copies of parents.

Verdict: No call for further rounds.

Samsung R&D Bangalore

Abhay

First round

1. Asked about projects and question related to that.
2. Difference between mutex and binary semaphore
3. What is DFS and BFS.
4. When to use DFS and when to use BFS.
5. Do the in-place transpose of a matrix
6. Difference between memory mapped I/O vs serial I/O.
7. Why do we go for whole deep learning thing instead of classical ML techniques.

Second round

1. Again asked to explain projects.
2. How I will use this project in mobile device.

Third round (HR)

1. What are your USP.
2. What things you want to achieve in 5 years.
3. What are your weaknesses.
4. All HR related questions.

Verdict: [Selected]

Samsung R & D Noida

Hari

Round 1(Technical & HR)

1. Started with brief introduction.
2. Asked me to explain the projects written in resume and some questions on them.
3. Given two sorted arrays and asked what algorithm will you apply them to make a new sorted array using both sorted arrays
4. Is cpp platform dependent or independent.
5. Asked cpu scheduling algorithms in OS
6. Some questions on process and threads
7. Now started with HR person sitting beside him asked what are the challenges you faced while doing the projects mentioned in the resume
8. How your classmates approach you for suggestions of assignments given for class
9. Some personality type questions.Be genuine.

Round 2(Technical)

1. Started with brief introduction
2. Asked me to explain few projects in my resume in my case its 1.Camera Calibration(Computer Vision) 2.Object Recognition(Computer Vision)
3. Now started with Data Structures.Given a tree question.Print left view,Bottom view,Right view,Asked me to write a code for this.And what traversal is used to print left view of a tree(ans Pre-order)
4. Asked few questions from Linked List
5. Write pseudo of DFS and BFS and when you use these algorithms like when to use dfs or bfs with an example

Round 3(HR)

1. Why Samsung?
2. What are your strengths ,Weakness
3. How can you guarantee me that you will join Samsung
4. If you get an offer of 50lpa will you still join samsung
5. Why only samsung
6. You are from south india why you are willing to work in Delhi why not south india
7. What are your area of Interests

I got selected.

Suggestions:Prepare basic data structures well,Trees,Linked List and graphs are must.they will sure ask at least one question from them.A person who given interview before me was asked same tree question(Left ,Right,Bottom View) and unable to answer and he was rejected.So Trees and Linked list questions are important.

Lalith

Round 1 (Technical)

1. Explain CNN ? (because i have done my minor project related to CNNs)
2. Write code to implement queue using two stacks?
3. Write code for Kadane's Algorithm? (
<https://www.geeksforgeeks.org/largest-sum-contiguous-subarray/>)
4. Explain and write code for any sorting Algorithm? Explain why you prefer this?
5. Explain DFS and BFS for a given graph?

Round 2 (Technical & HR)

1. Explain Trie data structure? How insertion and deletion is done for the same?
2. Check give linked list have a cycle or not ?
<https://www.geeksforgeeks.org/detect-loop-in-a-linked-list/>
3. Why Samsung?

Verdict: [Selected]

Samsung R & D Delhi

Deepak

Round 1 (Technical)

1. Explain your project.
2. Logistic regression vs linear regression
3. LinkedList data structure and its method implementation.
4. A LinkedList problem to delete last kth element. (answer should be more efficient than traditional one.)
5. A puzzle related to Armstrong number.

Round 2

1. Why samsung and how do you see yourself working here?
2. Explain 3 important must have traits for software developer.
3. Why samsung and Can you accommodate to Delhi?

Verdict: [Selected]

Lalith

Round 1 (Technical)

1. Explain CNN ? (because I've done my minor project related to CNNs)
2. Explain CPU scheduling (RR and SJF)? (OS assignment)
3. Write code for merge sort and explain it with an example?
4. Properties of Binary Search Tree? And how do check given tree is BST or not?
Write code for the same?
5. Propose an idea on how can we improve features for smart TVs as you have done projects related to ML?

Round 2(HR)

1. Why samsung R&D Delhi over samsung R&D Noida? (Because they got to know I have been selected for noida before coming for delhi interview)
2. Why do you think AI & ML will rule the world?
3. What profile do you choose to work in samsung delhi?

Verdict: [Selected]

Uber

Devyani

Round 1 (Technical) (1 hr)

- Explain your thesis. What do you know about Uber?
- Write a code for following problem -

You are given a graph with various connected components. Every node has associated weight and coins. Given a weight, you have to maximize the number of coins. You can either select a node or the entire component.

Interviewer asked me to write pseudocode on paper and run for few given examples. Then asked to write code on laptop (Hackerrank platform - you can choose the language of your choice)

Verdict: [Not Selected]

Asmita

Round 1 (Technical) (1 hr)

1. Write a code for following problem -

Given an array and low and high value. Count the number of contiguous subarrays having max of the array in range of low and high(both inclusive)

Interviewer asked me to write pseudocode on paper and run for few given examples. Then asked to write code on laptop (Hackerrank platform - you can choose the language of your choice)

Verdict: [Not Selected]

Goldman Sachs

Asmita

Round 1 (Technical) (20 mins) (Panel of 2)

1. Given a $n \times n$ matrix, find the row which doesn't contain both max and min element of array. what is the complexity of it.

2. Given an array, comparisons to find the min and max.

3. Given an array how to find the min and max in less than $2n - 2$ comparisons.

4. Given 2 arrays, we need to find a pair of elements(one from each array) such that sum of pair is 0.

- Without using extra space

5. Tell me about your industry experience and projects.

Round 2 (Technical) (30 mins)

1. Tell me about your industry experience in details.

2. Problem - Minimum number of steps to reach the end in snake and ladder game.

Interviewer interested in approach to convert given problem into program (Data structures used/ Techniques used)

3. Problem - Given transaction flow per day in/out, need to find ratio - total out flow/ total in flow for given window of 14days. As per this, particular transaction will be part of 14 windows. Calculate max from all 14 windows and given transaction will be active only for that ratio. And it should not be part of any other ratio.

Verdict: [Not Selected]

One Plus

Ankit

Round 1 (Technical)

- Explain your projects briefly .
- Write code for Producer-Consumer in the context of process synchronization.
- Which Scheduling policy you'll use for an OS running on an android phone.
- Questions about priority inversion (which I didn't know at that time hence, it couldn't go to priority inheritance).
- What will be the Size of given structure? Followed by why padding is done.
- Difference between a Normal uP and a DSP.
- Difference between calloc and malloc.
- he asked me about the tumor segmentation project (what and how I did). I was supposed to give him an overview but I ended up explaining morphological operation for a good 10 minutes.
- Puzzle Segment:
 - Cut cake into 8 pieces using 3 cuts, any other solution then the known one, if not why.
 - 3 switches 1 bulb problem.

- A grid was given, had to fill numbers from 1-8 such that no two consecutive numbers were neighbors, explain the logic behind the solution.
- Virtual keyword in OOP.
- ML Question: How will you use ML in daily life (he particularly asked about a solution to 'pollution'. Followed by the infrastructure requirement of the idea. (He was an OS guy, so I don't think he had any further questions about ML).
- Volatile keyword (I didn't know so no further questions on this).
- Deep copy and shallow copy.

2nd round

- Question about GATE rank.
- Why the change (EE to Computer Technology).
- Would you be able to shift to Hyderabad (basically climate adjustment).
- Which area would you like to work in.
- What if not given that choice.

3rd round

- What did you learn from the projects ?
- How your projects are relevant to the job (I earlier said that I saw their pamphlet
- What is your biggest weakness?
- Again, what if you're not given the area of interest.
- Why should we hire you.
- What is your dream company and why ? (I said Tesla, as I did my bachelors in EE and I have interest in CV).
- What after accepting this offer, you find another company offering you a role of your interest, would you join that company or OnePlus?
- I think I had projected to them that I am interested entirely in Image Processing or CV, so most of the questions in HR were based on that.

Verdict: [Selected]

Deepak

Round 1 (Technical)

1. Explain your project thesis.
2. Explain CPU scheduling algorithms and FTP client server project.
3. How do you implement FTP client server problem for thousands of clients.

4. Explain threads vs process, multithreading vs multiprocessing.
5. What is oops? Main features of oops.
6. Polymorphism and abstractions, overriding vs overloading
7. Static variable, can you override or overload static variable
8. Call by reference vs call by value. Give example.
9. Do you remember any questions from online test.
10. A problem based on destructor.

Verdict: [Didn't get call for further round]

Mavenir

Deepak

Didn't appear for the interview as previously selected in Samsung Delhi.

Swapnil

Didn't appear for the interview as previously selected in Analog Devices.

Lalith

Round 1 (Technical)

1. More questions related to OS:
 - Process and threads
 - CPU scheduling (CFS)
 - Memory management
 - Synchronization
2. Data structures and algorithms:
 - Graphs (Explain DFS and BFS)
 - Linked list (Node deletion code)
 - Tree based questions.
3. Write code for Producer Consumer Problem using Semaphores ?

Verdict: [Selected for next round but did not appear]

Amazon

Palash (SDE)

TIP : You should be very strong at data structures and algorithms. They are not interested in your CV

Round 1

- Asked to briefly introduce **myself** and to explain my thesis
- He was trying to know the individual's contribution in the project (like he was asking all theory/models you have used are all available there, have you faced any problem ? How you overcame that ?)
 - Somehow succeeded to convince him
- Asked to traverse a balanced tree cyclically (cycle start from left arm of tree then bottom arm then right arm and it continues towards inner side of a tree)
 - Not able to figure it out
- Asked to copy randomized pointer linked list
 - Answered it (partially) using extra memory
- Asked to optimize solution for above problem
 - Was trying but he interrupts me send me to the second round

Round 2

- He was also asked me to introduce myself and to explain my thesis
- Then, he jumped to DP problem -
There is roof divided into the squares, in some squares there are persons, in some there exist a door, in some there is a wall and then whole roof got caught with fire. To cross each square 1 min time required.
Find a solution such that each person should be able to escape the roof within a min time
 - Answered him with brute force approach
 - He forces me to find better solution
 - Tried, but not able to convince him

Verdict : Not Selected

Enphase

Deepak

Round 1:

1. Explain your project thesis
2. What is oops.
3. Main feature of oops.
4. Polymorphism and abstraction in oops concepts.
5. Singleton class in c++
6. Process vs threads

Verdict: [Didn't get call for further round]
