

2 easy-medium DSA questions , Behavioural round was heavy. You are given 3 scenarios and you have to answer accordingly for some questions like advanced psychometric tests (following amazon leadership principles refer to Youtube or amazon career). Also behavioral questions to access your engineering paradigm and your problem solving approach

Note: Behavioral sections are important for amazon specially leadership principles

Q1. You are given an array of length n and integer k , you have to return the smallest and largest possible median of the subsequence of length k from the array

$1 \leq n \leq 10^5$ and $1 \leq k \leq n$

Q2. You are given a string of length n . You have to sort them with the following Operation: choose a *proper substring* and sort it. Proper substring is all the possible substrings from s but the substring must not be equal to s . Return the minimum number of operations required to sort the string.

$1 \leq n \leq 10^5$
