

Amex IIT-BHU

① Given a binary string you have to make its value to zero

like "011100" $\rightarrow$ 28

it's even divide it by 2 $\rightarrow$ 14

still even divide by 2 $\rightarrow$ 7

odd $\rightarrow$ subtract it by 1 $\rightarrow$ 6

even $\rightarrow$ 3

odd subtract $\rightarrow$ 2

even $\rightarrow$ 1

subtract $\rightarrow$ 0

ops
7

it took 7 operations to convert it to 0.
return number of operations.

② A digram is called ~~as~~ a string with two adjacent character ~~in the~~ given from the given string.

"a z b a k c" digrams are $\rightarrow$ "az", "zb",
"ba", "ak",
"kc"

you have to return the maximum distance between the two identical digrams.

initial initial position of digram would be its starting index.

eg

"b a z b a k c a z"
0 1 2 3 4 5 6 7 8

"az" $\rightarrow$ 1, 7

so our result would be 6

③ Given n processes return the minimum time took to execute them all, A single CPU can run two process at one time

p = 150ms, q = 200, r = 1000ms

run p & q together $\rightarrow$ 350, then run q & r together
 $350 + 1050 \rightarrow 1400$
