

**Que) Tell us about yourself**

I am Priyesh a 5<sup>th</sup> year dual degree student with majoring in mechanical engineering with master's in Computer Integrated Manufacturing. I was born and brought up in Indore in a family of 5 and moving to Mumbai seemed like a challenging transition. But, the city and institute have been very nice to me and have afforded me a lot of opportunities.

From working on product trials and simulations with senior leadership of Mondelez last summer to being able to contribute to Covid propagation Modeling for providing analysis to the GoI, I have had a variety of experiences.

I was fortunate enough to complete an exchange program at Koc University Istanbul, before the pandemic struck.

Apart from these, I have been a member of the team managing Alumni Student Mentorship Program, I have also been a teaching assistant and a buddy to incoming exchange students at IITB.

In my free time, I like watching informative channels like Aircrash Investigation and trying out my hands on cooking foods from different cuisines. I also like to travel and explore.

As you can see, I have been fortunate enough to be able to capitalize on diverse opportunities that came up to me, which have altogether made me a better individual.

**Short – term goals:**

Diversify and strengthen my skillset

Gain experience working in teams and building teams

Create an impact my field lets say if I get a chance to work at citi then for our customers which essentially is what Citi believes in

**Long – term goals:**

Efficiently complete projects and deliver results

Gain more management experience

**Strengths/Qualities:**

Adaptable & inclusive - Turkey, Koc Projects, Exchange Buddy

Responsible, Reliable & Result Oriented - Mondelez and LLOYD

Team player - TA, ASMP

Ambition and ability to back it - Branch Change

Quick Learning - Operations Research, Finance, SCM, ML/RL

**Weakness:**

Diving deep into details – I was given a feedback on my internship to adopt an inch deep miles wide approach. And, I did work upon it soon enough realizing the 80,20 rule. It really helped me widen my horizons.

Tend to fix my problems: often see I am unable to move on when I have made some reasonable amount of progress

**Handled disagreement/Tough decision:**

Koc over CTU and Politecnico de Milano; structured approach, pros and cons, acads, INDR, economic, break the stereotypes.

**Achievements:**

Personal value addition – confidence, responsible, expressive, been able to help,mentor and create impact (TA,exchange buddy, ASMP)

Branch Change – top 10% students only, people degrade it but I see it as an aim to be the best among the best. Looking back at first year, quite a good amount of nostalgia to set a high target and then achieve it

Diversify my know-how (A+ in stochastic models) varied internships and projects. Got a valuable network of friends and future global leaders.

**Craziest/adventurous thing done:**

During a trip to Uludag, a famous skiing spot in Turkey, we were climbing up towards the peak when everyone else had started going back. Were advised to discontinue the ascent but 2 of us decided not to stop and continued. Late in afternoon after reaching the top, drank a Coca Cola amidst heavy Snow Smoke, which was in my bucket list, shot a video, made a new friend who had visited India (Bosch) and told me that recently 2 skiers went missing. Ran and slid down back.

**Took responsibility when others didn't:**

LLOYD fake

ASMP photos, TAsip addressing issues between heavy placement semester

**Moral Conflict:**

**Convinced group having different views:**

**Social Concern:**

Cured, pro-bono on Covid – learning as well concern to contribute, harmony and bonding turkey

**Limited resources & time:**

**Something not in Resume:**

Daru sutta is love but no illegal stuff and drugs.

I dream of having my own garage of sports and cruising bikes.
