A luxury shoe store wants to open a new franchise in a city. The store owner decides to install display units on all four walls of the store by hiring a fixture maker. However, on completion of the installation, the store owner complained saying that a portion of a high wall was missing display units.

The manager of the fixture company asked the workers as to whose fault it was but the workers refused to say anything. Hence, the manager decides to question the workers and the following facts are ascertained:

- (1) No one other than W1, W2, W3 was involved in installing displays.
- (2) W3 never does a job without the help of W1 (and possibly others) as an accomplice.
- (3) W2 does not know how to install fixture on high walls.

Is W1 innocent or guilty?

A newly launched coffee company wants to conduct a survey for its assorted pack containing three flavours hazelnut, Irish cream and caramel. To do this, 40 people were asked to rank the three flavours from 1 - 3, 1 being the most preferred and 3 being the least preferred.

All 40 responses were gathered and it was observed that no two flavours were ranked equally by any people that attended the survey. It was also observed that $\frac{1}{5}$ people ranked Irish cream last, $\frac{2}{5}$ people ranked Irish cream before hazelnut and $\frac{1}{4}$ people ranked Irish cream before caramel.

Analyse the given scenario and determine the number of people that ranked Irish cream first.

Jake is a butcher. Given below is his selling procedure:

1. Get the order from the customer
2. Weigh the meat on the goods pan against the weights put on the weighing pan
3. Give it to the customer.

However, certain criteria need to be met.

1. The order can be anything in kilograms as long as it is a whole number.
2. The weight cannot be placed in the goods pan in the weighing machine.
3. Jake has to weigh the meat at one go and can't do it in parts.
4. If Jake can't measure the weight, he sends them back.

Jake has weights of 1, 2, 4, 8, 16, 32, 64 kilograms. Customers start coming to Jake's shop right from the morning. A customer buys the same weight of meat as his number. For instance, customer number 32 buys 32 kilograms of meat. A total of 128 customers come to Jake's shop on Wednesday.

How many customers went away disappointed that day?

- ☐ A change in input is immediately reflected in the output.
- ☐ A change in output occurs when the state of the master is affected.
- ☒ A change in output occurs when the state of the slave is affected.
- ☐ Both the master and the slave states are affected at the same time.

12. Representing digital circuits

Which of the following represents the digital circuit given below?

Answer Options

Select any one option

Clear Answer

☐ J-K flip-flop

☐ Clocked RS flip-flop

☒ T flip-flop

☐ Ring Counter

13. Response of a system

< Previous

Next >

A control system is defined by the given mathematical relationship:

$$d^2x/dt^2 + 6 \cdot dx/dt + 5x = 12(1 - e^{-2t}), \text{ where } x(t=0) = 0 \text{ and } x'(t=0) = 0$$

Calculate the response of the system as $t \rightarrow \infty$.

Answer Options

Select any one option

Clear Answer

☐ $x = 6$

☐ $x = 2$

☒ $x = 2.4$

☐ $x = -2$

15. The state of the counter

< Previous

Next >

A 2-bit counter circuit is shown below. It is given that the state of the counter at clock time t_n is '10'.

What will be the state of the counter (Q_A , Q_B) after three cycles?

16. Working with arrays

Predict the output of the following C code snippet.

```
bool compare (const void *a, const void *b)
{
    return ( *(int*)a == *(int*)b ); //L1
}

int search(void *arr, int arr_size, int ele_size, void *x,
bool compare (const void *, const void *)) //L2
{
    char *ptr = (char *)arr;
    int i;
    for (i=0; i<arr_size; i++)
        if (compare(ptr + i*ele_size, x)) //L3
            return i;
    return -1;
}

int main()
{
    int arr[] = {2, 5, 7, 90, 70};
    int n = sizeof(arr)/sizeof(arr[0]);
    int x = 7;
    printf ("The index is %d ", search(arr, n, sizeof(int), &x, compare));
    return 0;
}
```

16. Working with arrays

```
return i;  
return -1;  
}
```

```
int main()  
{  
    int arr[] = {2, 5, 7, 90, 70};  
    int n = sizeof(arr)/sizeof(arr[0]);  
    int x = 7;  
    printf("The index is %d", search(arr, n, sizeof(int), &x, compare));  
    return 0;  
}
```

Answer Options

Select any one option

Clear Answer

☒ The index is 2

☐ The code will throw an error at L1 and L2

☐ The code will throw an error at L2

☐ The code will throw an error at L2 and L3

17. No. of cycles for high observability

< Previous

Next >

You notice that the observability of a certain system is high.

What does this indicate about the number of cycles that are required to measure the output node value?

Answer Options

Select any one option

Clear Answer

☐ It is more

☐ It is equal

☒ It is less

☐ None of these

18. Infinite loops

< Previous

Next >

```
module dummy;
logic [2:0] x, y, z, add, sub;
int a;
sum_difference dut (.*);
initial begin
fork
begin: add_dummy
for (a = 0; a < 20; a++)
begin
x = a;
y = a + 10;
#20 $display("This will add");
end
end
join_X
```

I

```
begin: sub_dummy
for (a = 10; a > 1; a--)
begin
z = a;
#10 $display("This will subtract");
end
end
endmodule
```

You find that the above given simulation runs into an infinite loop and does not produce the required output. What could have been the value of X in the given scenario?

19. A AVR microcontroller

< Previous

Next >

Which of the following is **TRUE** about running the following code snippet in a AVR microcontroller?

```
LDI A, 20;  
LDI B, 0  
LDI C, 5  
ADD B, C  
DEC A;  
BRNE LOOP;  
OUT PORTC, B
```

Answer Options

Select any one option.

Clear Answer

- ☐ The target address must be within 64 bytes of the program counter.
- ☐ The target address must be within 32 bytes of the program counter.
- ☐ All of the conditional branches are using short jumps
- ☐ Both Choice 1 and 3
- ☐ Both Choice 1 and 2
