Directions : The questions given below are based on the graph. Read the graph carefully and answer the questions that follow.

The first graph shows the estimated expenditure (in '000 \$) of a company to complete 3 stages of a project, namely, planning, execution and analysis. To complete the project, the company would utilize its internal resources as well as refer to expert help from specialists, which are from outside the company. The second graph shows the actual expenses (in '000 \$) for the same 3 stages of the project.

Question: Which of the following accounts for at least 40% of the actual total project cost?

- I. Estimated internal expense in execution stage
- II. Estimated total expense in planning and analysis stages
- III. Total estimated specialist expense in all stages together

Select an option

☒ Only I☐ Only II☐ I and III☐ I, II and III

Select an option

Read the following passage and answer the given questions.

On August 9, 2016, Raghuram Rajan, the governor of Reserve Bank of India (RBI), released the last bimonthly monetary policy statement that would be drafted under his leadership. There were no changes made. According to the RBI, the growth in the current fiscal year is projected at 7.6 percent because of the beneficial effects of good monsoon and the expansionary effects of the implementation of the Seventh Pay Commission's recommendations. Therefore, growth is not an immediate problem. However, in RBI's view, this growth brings with it the risk of inflation. Hence, any further reduction in interest rates was not warranted, at least not for now.

Rajan has the image of a policymaker with a penchant for a high-interest rate regime. When he took over as the governor of RBI in the first week of September 2013, the repo rate stood at 7.25 percent. It was raised to 7.5 percent soon thereafter, and then to 7.75 percent on October 29, 2013, and to 8 percent on January 28, 2014, where it stayed until January 15, 2015. Since then, the repo rate has been reduced thrice by 25 basis points (a quarter of a percentage point) and once by 50 basis points to bring it to its current level.

The defence Rajan had for his adherence to a high-interest rate policy was that it was needed to combat actual inflation or pre-empt potential inflation. In fact, inflation targeting moved to centre stage of monetary policymaking under Rajan. Inflation was to be the focus of the monetary policy and had to be kept within a 2 percent band around an annual 4 percent rate. Among the measures that had to be adopted to realize this objective, was a manipulation of interest rates and adjustments of the level of liquidity in the economy.

One of the measures suggested to control inflation is _____.☐ the adoption of contractionary monetary policy☐ the adoption of expansionary monetary policy☒ interest rate manipulation☐ framing a discretionary fiscal policy

Select an option

Read the following passage and answer the given questions.

On August 9, 2016, Raghuram Rajan, the governor of Reserve Bank of India (RBI), released the last bimonthly monetary policy statement that would be drafted under his leadership. There were no changes made. According to the RBI, the growth in the current fiscal year is projected at 7.6 percent because of the beneficial effects of good monsoon and the expansionary effects of the implementation of the Seventh Pay Commission's recommendations. Therefore, growth is not an immediate problem. However, in RBI's view, this growth brings with it the risk of inflation. Hence, any further reduction in interest rates was not warranted, at least not for now.

Rajan has the image of a policymaker with a penchant for a high-interest rate regime. When he took over as the governor of RBI in the first week of September 2013, the repo rate stood at 7.25 percent. It was raised to 7.5 percent soon thereafter, and then to 7.75 percent on October 29, 2013, and to 8 percent on January 28, 2014, where it stayed until January 15, 2015. Since then, the repo rate has been reduced thrice by 25 basis points (a quarter of a percentage point) and once by 50 basis points to bring it to its current level.

The defence Rajan had for his adherence to a high-interest rate policy was that it was needed to combat actual inflation or pre-empt potential inflation. In fact, inflation targeting moved to centre stage of monetary policymaking under Rajan. Inflation was to be the focus of the monetary policy and had to be kept within a 2 percent band around an annual 4 percent rate. Among the measures that had to be adopted to realize this objective, was a manipulation of interest rates and adjustments of the level of liquidity in the economy.

According to the passage, the relationship between growth and inflation is the same as which of the following, in context of healthcare?

- ☐ Technological advancement leads to better healthcare
- ☐ Improved healthcare leads to low mortality rates
- ☐ Improved facilities at private hospitals lead to more patients
- ☒ None of the above
