Question 2

An aircraft door has 3 components - a mechanical system and a hydraulic system which need to work in tandem for the door to operate, and in case the above system fails, there is also an electronic controller which can operate the door all by itself. The chances that the mechanical system, the hydraulic system, and the electronic controller work properly are 90%, 80%, and 95% respectively.

Given that the door fails to operate, what is the probability that the failure was due to the failure of only the mechanical system and the electronic controller?

The first pie chart shows the breakup of the revenue generated in the year 2012 from different companies of a conglomerate which sells electronic items. However, one of the companies, F, generating 10% of the total revenue of the conglomerate has been left out. The second pie chart shows the breakup of the revenue generated in the year 2012 from different products sold by the conglomerate. Again, one of the products, U, generating 20% of the total revenue of the conglomerate has been left out.

If the errors in the above pie-charts are corrected, what would be the correct revenue percent share of company D from amongst all the companies in the conglomerate?

- ☐ 25.0%
- ☐ 30.0%
- ☐ 30.3%
- ☐ 33.3%

Question 11

Directions : The questions given below are based on the graph. Read the graph carefully and answer the questions that follow.

The first graph shows the estimated expenditure (in '000 \$) of a company to complete 3 stages of a project, namely, planning, execution and analysis. To complete the project, the company would utilize its internal resources as well as refer to expert help from specialists, which are from outside the company. The second graph shows the actual expenses (in '000 \$) for the same 3 stages of the project.

Question: Which stage(s) has the highest expense escalation?

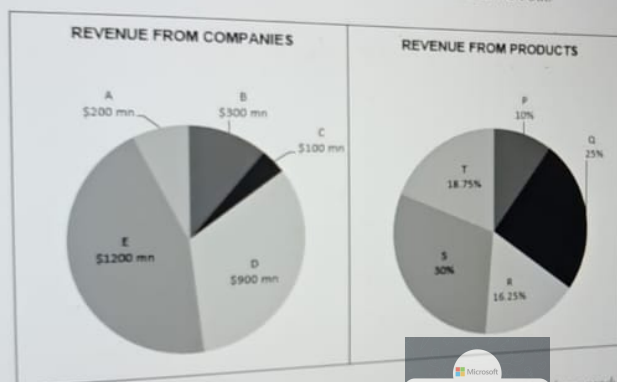

Select an option

- ☐ Planning
- ☐ Execution
- ☐ Analysis
- ☐ Both options B and C

Question 10

The first pie chart shows the breakup of the revenue generated in the year 2012 from different companies of a conglomerate which sells electronic items. However, one of the companies, F, generating 10% of the total revenue of the conglomerate has been left out. The second pie chart shows the breakup of the revenue generated in the year 2012 from different products sold by the conglomerate. Again, one of the products, U, generating 20% of the total revenue of the conglomerate has been left out.

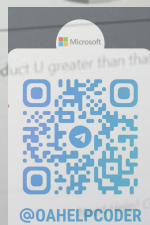

By what percent is the revenue generated from product U greater than that from product T?

Select an option

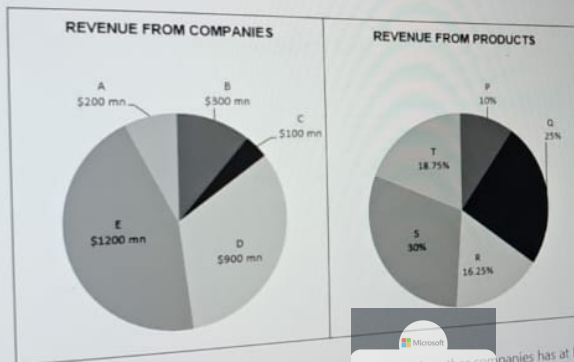

- ☐ 22.5%
- ☐ 50%
- ☐ 16.67%
- ☐ 33.33%

18.75%

Question 12

The first pie chart shows the breakup of the revenue generated in the year 2012 from different companies of a conglomerate which sells electronic items. However, one of the companies, F, generating 10% of the total revenue of the conglomerate has been left out. The second pie chart shows the breakup of the revenue generated in the year 2012 from different products sold by the conglomerate. Again, one of the products, U, generating 20% of the total revenue of the conglomerate has been left out.

If company E deals only in products Q and S, and each of the other companies has at least 10% contribution to product Q, then what is the maximum percentage contributed by any company in product Q?

Question 33

Attempted: 0/36

Revisit Later

Select an option

Clear Response

Read the following passage and answer the given questions.

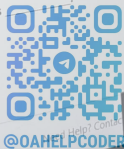

On August 9, 2016, Raghuram Rajan, the governor of Reserve Bank of India (RBI), released the last bimonthly monetary policy statement that would be drafted under his leadership. There were no changes made. According to the RBI, the growth in the current fiscal year is projected at 7.6 percent because of the beneficial effects of good monsoon and the expansionary effects of the implementation of the Seventh Pay Commission's recommendations. Therefore, growth is not an immediate problem. However, in RBI's view, this growth brings with it the risk of inflation. Hence, any further reduction in interest rates was not warranted, at least not for now.

Rajan has the image of a policymaker with a penchant for a high-interest rate regime. When he took over as the governor of RBI in the first week of September 2013, the repo rate stood at 7.25 percent. It was raised to 7.5 percent soon thereafter, and then to 7.75 percent on October 29, 2013, and to 8 percent on January 28, 2014, where it stayed until January 15, 2015. Since then, the repo rate has been reduced twice by 25 basis points (a quarter of a percentage point) and once by 50 basis points to bring it to its current level.

The defence Rajan had for his adherence to a high-interest rate policy was that it was needed to combat actual inflation or pre-empt potential inflation. In fact, inflation targeting moved to centre stage of monetary policymaking under Rajan. Inflation was to be the focus of the monetary policy and had to be kept within a 2 percent band around an annual 4 percent rate. Among the measures that had to be adopted to realize this objective, was a manipulation of interest rates and adjustment of the level of liquidity in the economy.

One of the measures suggested to control inflation is

- ☐ the adoption of contractionary monetary policy
- ☐ the adoption of expansionary monetary policy
- ☒ interest rate manipulation
- ☐ framing a discretionary fiscal policy
