PASSAGE

Give people power and discretion, and whether they are grand viziers or border guards, some will use their position to enrich themselves. The problem can be big enough to hold back a country's development. For most people in the world, though, the worry is not that corruption may slow down their country's GDP growth. It is that their daily lives are pervaded by endless hassles, big and small. And for all the evidence that some cultures suffer endemic corruption while others are relatively clean, attitudes toward corruption, and even the language describing bribery, is remarkably similar around the world.

In a testament to most people's basic decency, bribe-takers and bribe-payers have developed an elaborate theatre of dissimulation. This is not just to avoid detection. Even in countries where corruption is so common as to be unremarkable and unprosecutable, and even when the transaction happens far from snooping eyes, a bribe is almost always dressed up as some other kind of exchange. Though most of the world is plagued by corruption, even serial offenders try to conceal it.

One manifestation of this is linguistic. Surprisingly few people say: "You are going to have to pay me if you want to get that done." Instead, they use a wide variety of euphemisms. One type is quasi-official terminology. The term widely used at border crossings is "expediting fee". For a euphemism it is surprisingly accurate: paying it will keep your bags, and perhaps your contraband, from being dumped onto a floor and sifted through at a leisurely pace. (A related term, used in India, is "speed money": paying it can get essential business permits issued considerably faster.)

Choose the correct answer based on the passage.

What is the contextual meaning of the word "dissimulation" given in the first line of the second paragraph?

OPTIONS

Hypocrisy

Clarity

Frankness

Insult

A second type of euphemism dresses up a dodgy payment as a friendly favor done by the bribe payer. There is plenty of creative scope. Nigerian policemen are known to ask for "a little something for the weekend". Mexican traffic police will suggest that you buy them a Refresco, a soft drink, as will Angolan and Mozambican petty officials, who call it a Gazoso in Portuguese.

Double meaning can help soothe the awkwardness of bribe-paying. Baksheesh, originally a Persian word now found in many countries of the Middle East, can mean "tip", "alms" and "bribe". In Kenya a machine gun wielding guard suggested to a terrified Canadian aid worker: "Perhaps you would like to discuss this over chai?" The young Canadian was relieved: the difficulty could be resolved with some chai, which means both "tea" and "bribe".

Along with the obscurantist language, bribe-taking culture around the world often involves the avoidance of physically handing the money from one person to another. One obvious reason is to avoid detection, which is why bribes are known as "envelopes" in countries from China to Greece. But avoidance of a direct hand-over is common even where there is no chance of detection. There will always be some officials who will take money right from a bribe payer's hands, but most seem to prefer to find some way to hide the money from view.

Rich westerners may not think of their societies as plagued by corruption. But the definition of bribery clearly differs from person to person. A New Yorker might pity the third-world businessman who must pay bribes just to keep his shop open. But the same New Yorker would not think twice about slipping 50 dollars to sneak into a nice restaurant without a reservation. Poor people, the world over, are most

Angolan and Mozambican petty officials, who call it a Gazoso in Portuguese.

Double meaning can help soothe the awkwardness of bribe-paying. Baksheesh, originally a Persian word now found in many countries of the Middle East, can mean "tip", "alms" and "bribe". In Kenya a machine gun wielding guard suggested to a terrified Canadian aid worker: "Perhaps you would like to discuss this over chai?" The young Canadian was relieved: the difficulty could be resolved with some chai, which means both "tea" and "bribe".

Along with the obscurantist language, bribe-taking culture around the world often involves the avoidance of physically handing the money from one person to another. One obvious reason is to avoid detection, which is why bribes are known as "envelopes" in countries from China to Greece. But avoidance of a direct hand-over is common even where there is no chance of detection. There will always be some officials who will take money right from a bribe payer's hands, but most seem to prefer to find some way to hide the money from view.

Rich westerners may not think of their societies as plagued by corruption. But the definition of bribery clearly differs from person to person. A New Yorker might pity the third-world businessman who must pay bribes just to keep his shop open. But the same New Yorker would not think twice about slipping 50 dollars to sneak into a nice restaurant without a reservation. Poor people, the world over, are most infuriated by the casual corruption of the elites rather than by the underpaid, "tip"-seeking soldiers or functionaries. Thus there is no single cultural or social factor that inclines a society toward corruption, but economic factors play a big part. Most clearly, poverty and bribery go together.

Choose the correct answer based on the passage.

What would the author most likely agree with?

OPTIONS

People generally do not try to hide the money taken as bribe.

People hide the money taken as bribe primarily to avoid detection.

People hide the money taken as bribe from view even if detection possibility is low.

People hide the money taken as bribe to hide their economic background.

The graph given below shows the number of undergraduate applicants to Ralph University and the amount spent by the university each year to process the applications.

The graph displays two data series over a five-year period. The blue line represents undergraduate applicants in thousands, and the orange line represents processing expenses in thousands of dollars. The x-axis shows years from 2009 to 2013, and the y-axis ranges from 0 to 45. The data points are as follows:

Year	Undergraduate applicants (in 000s)	Processing expenses (in 000s \$)
2009	35	4
2010	15	8
2011	20	5
2012	40	3
2013	35	9

For the past five years, on average, paper costs contributed 30%, while staff salaries and marketing contributed 45% and 25%, respectively, to the application processing outlays. Assume that in all these years, the revenue per applicant has remained unchanged.

Refer to the given information. Select 'Yes' if the statement is definitely true otherwise select 'No'.

Statement: Given the trend over the past five years, one can observe that when the total number of applicants increases, the cost of processing the applications decreases, and vice versa.

Choose the correct option.

What inference can be drawn based on the following information?

Movie actors are bound by a set of legal, ethical and contractual obligations to the movie's investors. They are required to be professional, finish the shoot on time and not reveal any details about the movie without the consent of the director. Any breach of these terms can result in the actor being sued by the production house, being dismissed from the film or even having a long-term contract with the production company rescinded.

OPTIONS

Both, the actors' finances and their reputation will suffer if they breach their obligations.

Contractual penalties ensure that a production house does not have to enforce an actor's professional duties.

The severe penalties for breach of contract serve to deter actors from delaying the movie.

Actors are legally and contractually obligated to the movie's investors but not to the director or their fellow actors.

Lawsuits in the movie industry are mostly between production houses and the actors.

The manager gives some typing work to Sara. She has to type an email for a customer and certain mathematical equations for a technical manual. On average, she types 35 words per minute and 2 equations per minute. The mathematical equations are to be sent to the technical team. The maximum word limit for the email is 525 words. The average length of emails sent is 140 words. The technical manual has 5 sections and each section explains a maximum of 4 equations. In the last technical manual that Sara had typed, there were only 3 equations in each section.

Choose the correct option based on the given information.

Which of the given statements has to be **definitely true** for Sara to be able to commit to the delivery of the typed email and equations within 21 minutes?

OPTIONS

Introduction text of 150 words has to be copied and pasted from an existing email.

The email is written in points.

The length of the email is restricted to 450 words.

The technical manual has to be released with a lesser number of equations this year.

Given: The Zeta index of a bank X with respect to bank Y, represented by Z_{xy} , is defined as the number of terms wherein the interest rate offered by bank X is greater than the interest rate offered by bank Y (with reference to the period of deposit).

For example: The Zeta index for Bank A with respect to Bank E is 1, as it is only in term IV that Bank A offers a higher interest rate than Bank E.

Study the given data and answer the question. Click on the *image(s)* to view the data.

How many banks have interest rates that remain the same between any two terms from I to IV?

OPTIONS

0

1

2

3

Figure 1: Shows the interest rates offered by different banks on fixed deposits for four terms, labeled I to IV.

Bank	I (1 yr)	II (2 yrs)	III (3 yrs)	IV (4 yrs)
Bank A	4.7%	5%	5.5%	6%
Bank B	5.5%	5.75%	6%	6.5%
Bank C	4%	4.25%	4.5%	4.75%
Bank D	6%	6.25%	6.5%	6.7%
Bank E	5.25%	5.5%	5.75%	6%
Bank F	5%	5.25%	5.5%	5.7%
Bank G	5.25%	5.5%	5.75%	6%
Bank H	6%	6.25%	6.5%	6.7%
Bank I	5.5%	5.75%	6%	6.5%
Bank J	5.25%	5.5%	5.75%	6%

Figure 2: Shows ratings of banks based on the difference between Z_{xy} and Z_{yx} .

Zeta Index	Rating of X with respect to Y	Rating of Y with respect to X
4	A1+	A1-
3	A2+	A2-
2	A3+	A3-
1	A4+	A4-

Which of the given statements shows an incorrect analysis of trends during the 2011-14 period?

OPTIONS

The largest number of new branches and ATMs combined were opened in Category A cities.

The smallest number of new ATMs introduced were in Category E cities.

The bank opened the fewest new branches in Category D cities.

More than 700 branches and ATMs apiece were opened in Category E cities.

SUBMIT ANSWER

Figure 1: Shows the total number of branches and ATMs of a bank in various categories of cities (classified by size) for three financial years.

Total no. of branches and ATMs of ABC Bank Pvt. Ltd. for 3 financial years						
Year	2011/12		2012/13		2013/14	
Cities	Branches	ATMs	Branches	ATMs	Branches	ATMs
Category A	1,341	4,390	1,852	6,789	2,415	8,012
Category B	984	2,789	1,331	3,789	1,749	4,076
Category C	654	1,672	972	2,581	1,129	3,850

Question

The current selected programming language is **C++14**. We emphasize the submission of a fully working code over partially correct but efficient code. Once **submitted**, you cannot review this problem again. You can use *cout* to debug your code. The *cout* may not work in case of syntax/runtime error. The version of **GCC** being used is **5.5.0**.

In a science research lab, combining two nuclear chemicals produces a maximum energy that is the product of the energy of the two chemicals. The energy values of the chemicals can be negative or positive. The scientist wishes to calculate the sum of the energies of the two chemicals which produces maximum energy on reaction.

Write an algorithm to find the sum of energy of the two chemicals which produces maximum energy on reaction.

Input

The first line of the input consists of an integer - *numOfChem*, representing the number of chemicals (N).

The second line consists of N space-separated integers - *ener*₀, *ener*₁,....., *ener*_{N-1} representing the energies of the chemicals.

Output

Print an integer representing the sum of energy of the two chemicals which produces maximum energy on reaction.

Constraints

$$0 \leq \text{numOfChem} \leq 10^6$$

$$-10^6 \leq \text{ener}_i \leq 10^6$$

$$0 \leq i < \text{numOfChem}$$

Example

Input:

7

9 -3 8 -6 -7 8 10

Output:

19

```
1 // Header Files
2 #include<iostream>
3 #include<string>
4 #include<vector>
5 using namespace std;
6
7
8 /*
9 *
10 */
11 int maxEnergy (vector<int> ener)
12 {
13     int answer;
14     // Write your code here
15
16
17     return answer;
18 }
19
20 int main()
21 {
22
23     //input for ener
24     int ener_size;
25     cin >> ener_size;
26     vector<int> ener;
27     for ( int idx = 0; idx < ener_size; idx++ )
28     {
29         int temp;
30         cin >> temp;
31         ener.push_back(temp);
32     }
33
34     int result = maxEnergy(ener);
35     cout << result;
36
37
38     return 0;
39 }
40
```

Question

The current selected programming language is **C++14**. We emphasize the submission of a fully working code over partially correct but efficient code. Once **submitted**, you cannot review this problem again. You can use *cout* to debug your code. The *cout* may not work in case of syntax/runtime error. The version of **GCC** being used is **5.5.0**.

An employee in an organization has begun working on N projects (numbered 0 to N-1). Each week he/she can work on a single module of one of the projects. The modules that are chosen on any two successive weeks should come from different projects. A project i can have at most Ci modules. The modules of the projects are such that a module is completed in a week.

Write an algorithm to determine the number of weeks the employee can work on projects following the above-mentioned rules.

Input

The first line of the input consists of an integer - *num*, representing the number of projects (N).
The next line consists of N space-separated integers - *projC0*, *projC1*, ..., *projCN-1*, representing the number of modules of the projects.

Output

Print an integer representing the maximum number of weeks the employee can work on the projects.

Constraints

$1 \leq num \leq 5 \cdot 10^4$
 $1 \leq projCi \leq 10^7$
 $\sum projCi \leq 10^5$
 $0 \leq i < num$

Example

Input:
3

Windows Taskbar

System Tray
