QUESTION: 1 GROUP: Aptitude SECTION: Quantitative Ability Mark(s): 1

Jainagar and Vijaynagar are 30 km apart, along the banks of a river. A boat ferries passengers daily between these two cities, starting and ending each trip at Jainagar. Due to safety reasons, the boat is allowed to operate between 6 AM and 8 PM only. If the boat can reach a maximum speed of 15 kmph, and the river runs at a speed of 5 kmph, what is the maximum number of trips the boat can do in a day?

☐ Cannot be determined☐ 4☒ 1☐ 3 ✓

Wash your clothes, or flush the toilet? Until last month, Ranjana Sharma had never considered the question. Then she arrived home one night to find her sister filling buckets. The hot season has occasionally caused brief water shortages in Shimla, the former summer capital of the British Raj. But for an unprecedented 15 days in May and June, most taps in the Indian Himalayan town ran completely dry. Public toilets were padlocked; families used disposable cutlery and threw it away; water trucks rolled in offering to fill tanks – at a steep mark-up; and people queued for hours to receive two buckets from a government supply. Most schools were shut, but not the one where Sharma works as a child psychologist. It stayed open but advised students not to flush the toilets. “I tried to avoid the bathrooms as much as possible,” she says. She chose to keep flushing her own. “I haven’t washed my clothes in weeks.” India is undergoing the worst water crisis in its history, a government think tank announced last week. About 600 million Indians face “high to extreme water stress” and about 200,000 die each year because they can’t get a clean supply of water. And the situation is getting worse. By 2030, water availability will be half of what India will need. The think tank quoted predictions that up to 6% of GDP could be lost to extreme water scarcity. Put another way, millions of Indians could be too thirsty, or sickened by contaminated water, to study, work or live.

Question: Based on the passage, it may be said that :

☐ The problem in Shimla is mainly due to the failure of the local administration.

☒ Shimla is witnessing its first-ever water scarcity issue. ✓

☐ The incidence of water scarcity in Shimla is not a new phenomenon.

☐ The problem is attributed to Shimla’s proximity to the Himalayas.

5 ★

The following table shows the total distance and ratio of the downstream speed to upstream speed of five different boats.

Boat	Total distance (km)	Ratio of upstream to downstream distance
A	1256	3 : 5
