Clear Response

Assume that you are working on a project in which you need to modify the project such that you can protect the processes from users, which means changing the operating-system code and data. Which type of allocation will you choose to accomplish the task? Select the appropriate answer from the given choices.

Select an option

- ☐ Module allocation
- ☐ Double-partition allocation
- ☐ Single-partition allocation
- ☒ Multiple-partition allocation

Question 4

Revisit Later

Select an option

Clear Response

Consider that you have the given array $arr[] = \{2, 1, 2, 3, 4, 5, 6, 5, 5, 4\}$.

If you insert all the elements in an integer set, what will be the size of the set? Select the correct option from the given choices.

☐ 5.0

☐ 10.0

☐ 7.0

☒ 6.0

Question 3

Revisit Later

Select an option

Clear Response

Consider the given code:

```
1 priority_queue pq;  
2 int cnt = 0;  
3 while (pq.size() > 1) {  
4     int a = pq.top();  
5     pq.pop();  
6     int b = pq.top();  
7     pq.pop();  
8     cnt += (a + b);  
9     pq.push(a + b);  
10 }  
11 cout << cnt;
```

The code is used with two priority queues pq1, pq2 with the same array of length > 3. For pq1, the cnt gives the value x and for pq2, it gives y. Given $x > y$. Which is the minimum and maximum heap? Analyze the given choices and select the correct option.

☐ pq1->max-heap, pq2->min-heap☐ pq1->min-heap, pq2->max-heap☐ Both are max-heap or min-heap☐ Cannot be determined

Consider the given relations with functional dependencies:

$PQ \rightarrow R$
 $R \rightarrow S$
 $R \rightarrow T$
 $T \rightarrow U$
 $U \rightarrow P$

Which aspect is present in the given relations? Select the correct answer from the given choices.

Select an option

Clear Response

☐ Multivalued attributes☐ No atomicity☐ Partial dependency☐ No partial dependency

Select an option

Clear Response

Consider an array `arr[] = {18, 32, 25, 41, 63, 11, 45}`. You want to find 18 using a binary search. What will be the first element you get when you start searching and what will be the last element before you get the desired element? Select the correct option from the given choices.

- ☐ First element: 41, Last element: 32
- ☐ First element: 32, Last element: 32
- ☐ First element: 41, Last element: 18
- ☐ First element: 25, Last element: 32

Select an option

Clear Response

Consider that you are a software developer building a vehicle management system for a transportation company. In order to represent different types of vehicles, you have a base class "Vehicle" with properties such as "make", "model", "year", and "price". Now, you want to create separate classes for cars, trucks, and motorcycles, each with specific properties. What is 'inheritance' in OOP? Select the correct option from the given choices.

- ☐ A mechanism for code duplication and complexity
- ☐ A mechanism for code reuse and abstraction
- ☐ A mechanism for code encapsulation and modularity
- ☐ A mechanism for code isolation and security

Question 5

Revisit Later

Clear Response

Assume that you are developing a software system for a car rental company. Which option best describes the use of abstraction in this scenario? Analyze the given choices and select the correct option.

Select an option

- ☐ Abstraction is used to represent only the essential features of a car such as its make, model, and rental price while hiding unnecessary details such as its engine capacity and internal components.
- ☐ Abstraction is used to represent all features of a car, including its make, model, rental price, engine capacity, and internal components.
- ☐ Abstraction is used to hide all the features of a car, showing only essential details such as its color and rental availability.
- ☐ Abstraction is used to hide only essential features of a car, showing unnecessary details such as its maintenance history and previous drivers.
