Question 1

How to Attempt?

Test Creation

Ralph manages a team of test creators who work on creating **N** tests for the recruitment processes of various companies. The team consists of $(n_1 + n_2 + n_3)$ interns who are categorized into three groups based on the tasks assigned to them. The groups are as follows:

- n_1 interns work on Test Research.
- n_2 interns work on Test Creation.
- n_3 interns work on Test Final Review.

Each intern in a group works with the same efficiency. The time taken by an intern in Test Research is **t** days, in Test Creation it is **t+2** days, and in Test Final Review it is **t-2** days, to complete their task. The HR team wants to ensure that all the interns work efficiently and complete their work within **D** days.

Your task is to determine and return whether it is possible to complete the work within the assigned time. If it is possible, return "Yes X," where X is the number of days it will take to finish the work, otherwise, return "No Y," where Y is the number of days short.

Attempted: 0/1

CSHARP

Compiler: Mono 4.2.1

```
1 using System;
2 using System.Collections.Generic;
3
4 //Read only region start
5 public class UserMainCode
6 {
7     public string testCreation(int input1,int input2,int input3,int input4,int input5,int input6)
8     {
9         //Read only region end
10        //Write code here
11        throw new NotImplementedException("Method testCreation(int input1,int input2,int input3,int input4,int input5,int input6) not implemented.");
12    }
13 }
```

Input Specification:

input1: An integer N, representing the total number of tests to be created.

input2: An integer n_1 , representing the number of interns working on Test Research.

input3: An integer n_2 , representing the number of interns working on Test Creation.

input4: An integer n_3 , representing the number of interns working on Test Final Review.

input5: An integer t, representing the time taken.

input6: An integer D, representing the number of days given by the HR team.

Output Specification:

Return a string denoting "Yes X," where X is the number of days it will take to finish the work, otherwise "No Y," where Y is the number of days short.

Example 1:

input1: 1

input2: 1

input3: 1

input4: 1

input5: 5

input6: 20

Output: Yes 15

returned as the output.

Example 2:
input1: 5
input2: 3
input3: 3
input4: 9
input5: 6
input6: 30

Output: Yes 26

Explanation:
Here, $N=5$, $n_1=3$, $n_2=3$, $n_3=9$, $t=6$, and $d=30$. So the tasks can be performed in the following manner:

- Teams 1 and 2, with 3 members each, will work together to complete their part of the 5 tests in $6+8+8=22$ days.
- After that, the third team, consisting of 9 members, will review the assessments in 4 days.

Since the total time required to complete the work within the given deadline is $22+4=26$ days, **Yes 26** is returned as the output.

Attempted: 0/1

CPP

Compiler: g++ 5.4.0

```
1 #include<stdio.h>
2 #include<string.h>
3 // Read only region start
4
5 char* testCreation(int input1,int input2,int input3,int input4,int input5,int input6)
6 {
7     // Read only region end
8     // Write code and remove the below exception.
9     throw "Function testCreation(int input1,int input2,int input3,int input4,int input5,int input6) is not implemented.";
10 }
```
