HackerRank Question - Virtual Memory

hackerrank.com/test/g1lj816k4tp/questions/fdc576kjgji

ORACLE FY'26 - Campus Hiring - IIT Guwahati - Internship_2 Aug

Answered: 21 / 36 01 hour 14 mins Rohan Dobarkar

2. Why is a virtual memory address called 'virtual'?

Why is a virtual memory address called 'virtual'?

Pick **ONE** option

- ☒ This memory address does not map to actual memory cell that corresponds to address number.
- ☐ This memory is the same as physical memory.
- ☐ This memory cannot be accessed by applications at run time.
- ☐ This memory address is always present even after a system is restarted.

ORACLE FY26 - Campus Hiring - IIT Guwahati - Internship_2 Aug Answered: 22 / 36 01 hour 12 mins Rohan Dobarkar

3. Consider the two functions `incr` and `decr` shown below. `incr(){ decr(){ wait(s); wait(s); X = X+1; X = X-1; signal(s); signal(s); }}` There are 5 threads each invoking `incr` once, and 3 threads each invoking `decr` once, on the same shared variable `X`. The initial value of shared variable `X` is 10. Suppose there are two implementations of the semaphore `S` as follows: I-1: `S` is a binary semaphore initialized to 1. I-2: `S` is a counting semaphore initialized to 2. Let `V1` and `V2` be the values of `X` at the end of execution of all the threads with implementations I-1 and I2 respectively. Which one of the following choices corresponds to the minimum possible values of `V1` and `V2` respectively?

Consider the two functions `incr` and `decr` shown below.

```
incr(){
    wait(s);
    X = X+1;
    signal(s);
}

decr(){
    wait(s);
    X = X-1;
    signal(s);
}
```

There are 5 threads each invoking `incr` once, and 3 threads each invoking `decr` once, on the same shared variable `X`. The initial value of shared variable `X` is 10.

Suppose there are two implementations of the semaphore `S` as follows:

I-1: `S` is a binary semaphore initialized to 1.
I-2: `S` is a counting semaphore initialized to 2.

Let `V1` and `V2` be the values of `X` at the end of execution of all the threads with implementations I-1 and I2 respectively.

Which one of the following choices corresponds to the minimum possible values of `V1` and `V2` respectively?

4. What is the main difference between "user mode" and "kernel mode" in an operating system?

What is the main difference between "user mode" and "kernel mode" in an operating system?

Pick **ONE** option

1 ☐ User mode allows direct hardware access, kernel mode does not.

✓ ☒ Kernel mode can access protected memory regions, user mode cannot.

3 ☐ Kernel mode applications are given less priority than user mode applications.

4 ☐ User mode instructions can switch the CPU to kernel mode, but not vice-versa.
